

Crop Advantage brings the latest production information - **information targeted to your farm** - to a location near you. Each program was developed to address local challenges and growing conditions. In addition, each location features a keynote presentation focusing on a statewide issue. Register today and **gain the advantage** for 2010.

## Keynote presentation

### Aphids: A sticky situation in soybean and corn

Erin Hodgson, Extension entomologist  
Looking for aphids in Iowa soybean fields and making well-timed treatments has been a part of growing a successful crop since their arrival in 2000. But there has also been a trend for increasing aphid populations in corn. Discussion on current tactics to minimize aphid pressure in both crops will be presented.

Erin Hodgson is an assistant professor and extension entomologist at Iowa State University. Her research and extension programs focus on integrated pest management in corn and soybean.
